India witnesses 2.73 lakh Covid cases

India witnesses 2.73 lakh Covid cases in a day (The Tribune: 20210419)

1,619 more deaths reported

India's total tally of Covid cases crossed 1.5 crore with a record single-day rise of 2,73,810 new coronavirus infections, while the active cases surpassed the 19-lakh mark, according to the Union Health Ministry data updated on Monday.

The total tally of Covid cases mounted to 1,50,61,919 and the death toll increased to 1,78,769 with a record 1,619 daily new fatalities, the data updated at 8 am showed.

Registering a steady increase for the 40th day in a row, the active cases have increased to 19,29,329 comprising 12.81 per cent of the total infections, while the national Covid recovery rate has dropped to 86 per cent.

The number of people who have recuperated from the disease surged to 1,29,53,821, while the case fatality rate has further dropped to 1.19 per cent, the data stated.

According to the ICMR, 26,78,94,549 samples have been tested up to April 18 with 13,56,133 samples being tested on Sunday.

The 1,619 new fatalities include 503 from Maharashtra, 170 from Chhattisgarh, 161 from Delhi, 127 from Uttar Pradesh, 110 from Gujarat, 81 from Karnataka, 68 from Punjab, 66 from Madhya Pradesh, 50 from Jharkhand, 42 each from Rajasthan and Tamil Nadu, 29 from Haryana, A total of 1,78,769 deaths have been reported so far in the country, including 60,473 from Maharashtra, 13,351 from Karnataka, 13,113 from Tamil Nadu, 12,121 from Delhi,
10,568 from West Bengal, 9,830 from Uttar Pradesh, 7,902 from Punjab and 7,410 from Andhra Pradesh. PTI

**To contain Covid, Maharashtra declares 6 states as places of sensitive origin** *(The Tribune: 20210419)*

Chief Secretary Sitaram Kunte in an order declares Kerala, Goa, Gujarat, Delhi and the NCR, Rajasthan and Uttarakhand as places of 'sensitive origin'

Struggling to contain the huge Covid surge, Maharashtra has declared six states, including Delhi and the NCR region, as places of "sensitive origin" in a bid to stop the influx of other variants of coronavirus into the state.

Maharashtra Chief Secretary Sitaram Kunte in an order issued on Sunday declared Kerala, Goa, Gujarat, Delhi and the National Capital Region (NCR), Rajasthan and Uttarakhand as places of "sensitive origin".

As per the order, passengers travelling to Maharashtra from these places will need a negative RT-PCR report of test conducted within 48 hours of their train travel.

The decision has been taken to curb the transmission of coronavirus in Maharashtra and to "stop the influx of other COVID-19 virus variants into the state from other locations," said the order.

"These places will be considered as the places of sensitive origin from the date of this order till the time it is retracted or till COVID-19 stays notified as a disaster," it said.

On Sunday, Delhi recorded the biggest jump in its daily COVID-19 tally with 25,462 new cases, while the positivity rate shot up to 29.74 per cent.

Maharashtra, which is the worst-hit state in terms of the number of cases and deaths, on Sunday reported the highest number of 68,631 fresh infections while 503 patients died, as per the state health department.

With this, the cumulative caseload in Maharashtra mounted to 38,39,338 while the death toll reached 60,473.
The Maharashtra government also issued standard operating procedures (SOPs) for passengers from the six states of sensitive origin.

For passengers travelling in long-distance trains from these places, the railways shall share data of the trains that are scheduled to be running between these places and stations in Maharashtra with the local disaster management authorities, as per the SOPs.

The data of passengers will be shared with local disaster management authority each day, four hours before the departure from the origin of trains, the government said.

No unreserved tickets will be issued from these places to Maharashtra. The railways should ensure trains from the places of sensitive origin come to outer platforms where it is easier to conduct thermal screening (of passengers), the order said.

If the passengers are not carrying the RT-PCR negative report, they will have to undergo a rapid antigen test at the station, it added. PTI

**DRDO to reopen facility for Covid patients in Delhi today (The Tribune: 20210419)**

DRDO to reopen facility for Covid patients in Delhi today

Workers refill oxygen cylinders in Patna on Sunday. PTI

The Defence Research and Development Organisation (DRDO) has decided to reopen a medical facility near the Delhi airport to treat Covid-19 patients, officials said on Saturday.

They said the facility was expected to be made operational with 250 beds by Monday. Meanwhile, the armed forces have revisited the protocols for quarantining their own troops while the medical wings of the three forces have stepped up efforts to provide Covid-related facilities that can be used by the civilian authorities.

The protocols for quarantining have been revisited and all troops returning to their units after leave or temporary duty elsewhere will be required to undergo 14-day quarantine.
The forces are doing hundreds of RT-PCR tests every day to determine the prevalence of the virus among their troops. Ex-servicemen are also being tested and being provided facilities.

Also, the three forces will once again be providing beds and facilities to civilians. The DRDO’s facility will have 500 beds eventually. Doctors and equipment like oxygen will be provided by the armed forces.

The forces will open their facilities for civilians in certain states, including Maharashtra and Gujarat.

When the virus had spread in February last year, the forces had created quarantine facilities for people returning from abroad. Meanwhile, the vaccination drive has been stepped up in the three armed forces – with a collective strength of all more than 16 lakh. Everyone will be vaccinated, irrespective of age of the person.

Hundreds of RT-PCR tests every day

Doctors and equipment like oxygen will be provided by the armed forces.

The forces will open their facilities for civilians in certain states, including Maharashtra and Gujarat.

The DRDO’s facility will start with 250 beds and will go up to 500 beds in the next few days.

The forces are doing a hundred RT-PCR tests every day to determine prevalence of the virus among their troops. Ex-servicemen are also being tested.

**Coronavirus**

**Coronavirus: Curfew in Delhi from tonight till next Monday morning (The Tribune: 20210419)**

Coronavirus: Curfew in Delhi from tonight till next Monday morning

Delhi government has decided to impose curfew from tonight till next Monday morning as Covid cases continue to surge.

Delhi on Sunday recorded the biggest jump in its daily COVID-19 tally with 25,462 fresh cases, while the positivity rate shot up to 29.74 per cent -- meaning almost every third sample being tested in the city is turning out to be positive.
Delivering more bad news in an unprecedented public health crisis sweeping not just Delhi but the entire nation, Chief Minister Arvind Kejriwal said less than 100 ICU beds are available in hospitals in the capital.

Authorities reported 161 deaths due to the disease in the last 24 hours. A day ago, 24,375 COVID-19 cases and 167 deaths were reported in the city.

**CM issues urgent appeal for beds as 1 in 3 samples is +ve (Hindustan Times: 20210419)**

https://epaper.hindustantimes.com/Home/ArticleView

Ambulances carrying Covid-19 patients at a hospital in Gujarat’s Rajkot on Sunday. ANI

Delhi on Sunday reported 25,462 Covid-19 cases, with about one in three samples testing positive, as chief minister Arvind Kejriwal made an urgent appeal to the Centre for more hospital beds to tackle the public health crisis, adding that the shortage of oxygen supply in the Capital was now an “emergency”.

Delhi is the middle of its fourth Covid-19 wave, the worst to hit the national capital so far. On Sunday, the positivity rate was 29.74%, with 161 deaths being reported in the last 24 hours.

Fewer than 100 intensive care unit beds were available in the city of more than 20 million people, Kejriwal said, with widespread complaints about the lack of beds, oxygen cylinders and crucial drugs.

“The bigger worry is that in last 24 hours positivity rate has increased to around 30% from 24% ... The cases are rising very rapidly. The beds are filling fast,” Kejriwal told a digital news briefing.

The test positivity rate – a ratio of the number of positive cases to total tests conducted, and a measure of the scale of an outbreak in the region – shot up from 0.59% over a month ago, to 29.74% on Sunday.

In a separate statement, the Delhi government said it informed the Centre about “the dire need of beds and oxygen” and beds were now being set up in schools.
Kejriwal said Delhi was facing an “acute shortage” of oxygen for Covid-19 patients and added that the quota of the city was diverted to other states. The remarks came hours after he wrote the letter to Prime Minister Narendra Modi.

“Del facing acute shortage of oxygen. In view of sharply increasing cases, Del needs much more than normal supply. Rather than increasing supply, our normal supply has been sharply reduced and Delhi’s quota has been diverted to other states. OXYGEN HAS BECOME AN EMERGENCY IN DEL,” the chief minister tweeted on Sunday evening. He also wrote a letter to Union commerce and industries minister Piyush Goyal in this regard.

The Union minister told ANI: “State governments should keep demand (for medical oxygen) under control. Demand-side management is as important as supply-side management. Containing Covid-19 spread is the responsibility of state governments and they should fulfil this responsibility.”

Delhi, which has imposed a weekend curfew, is among the worst hit cities in India. The weekend curfew comes on top of 10pm-5am night curfew restrictions that are in place until April 30.

Chief minister Kejriwal and lieutenant governor Anil Baijal will hold a meeting with senior government officers on Monday over the Covid-19 situation in the national capital.

Nationwide, India reported 275,482 new cases on Sunday, taking the total number of cases past 15 million, second only to the US, which has reported more than 31 million infections. The country’s deaths from Covid-19 rose by a 1,622 to reach a total of 178,814.

At the briefing, Kejriwal said he urged Union home minister Amit Shah to increase the number of Covid-19 beds in central government hospitals and help with oxygen supply. “In the last 24 hours, Delhi recorded around 25,500 new cases, up from around 24,000 the previous day and 19,500 new cases the day before that,” he said.

“Cases are increasing at a fast rate and Covid-19 beds are getting occupied across the city. People are getting admitted in hospitals at an unprecedented rate. There is a major crisis of ICU beds. There are less than 100 ICU beds left in Delhi. We are facing a major shortage of oxygen, too. Last night, a private hospital told us that they almost ran into a disaster situation with a major shortage of oxygen supply,” the CM added.

“We are constantly in touch with the central government. We are getting a lot of help from them. We thank them for that. Yesterday (Saturday), I spoke with Union health minister Harsh Vardhan. He was informed about the situation. Today, I spoke to Union home minister Amit Shah over phone. I have told him that we need more beds. In Delhi, the central government hospitals collectively have around 10,000 beds, of which around 1,800 are currently reserved for Covid-19 patients. I have requested him (Shah) to reserve at least 7,000 beds for Covid-19. The situation in Delhi is deteriorating every second. I also requested that oxygen supply be provided to us immediately,” said Kejriwal.
He added that the Delhi government will be adding more than 6,000 additional Covid-19 beds with oxygen facilities in two-three days in locations that include health facilities set up at Yamuna Sports Complex, CWG village and premises of Radha Soami Satsang Beas. “We don’t know how many ICU beds we will be able to increase in such a short time. There are limitations. But we have seen that most patients primarily need high-flow oxygen. So, we are arranging more high-flow oxygen systems so that more beds can be converted into oxygen beds,” he said.

In his letter to the PM, Kejriwal wrote: “The Covid-19 situation in Delhi is extremely serious. There is a severe shortage of Covid-19 beds and oxygen supply. At our level we are doing everything that is possible. We need your help.”

As per the Delhi health department, 25,462 Covid-19 cases and 161 deaths were reported in the last 24 hours, taking the total active cases in Delhi to 74,941. The total positive cases in the city now stand at 853,460, including 766,398 recoveries and 12,121 deaths.

As many as 85,620 samples were tested for the virus, including 56,015 RT-PCR/CBNAAT/TrueNath tests and 29,605 rapid antigen tests.

In the last 24 hours, 67,448 beneficiaries were vaccinated against the coronavirus. Around 54,306 received the first dose, while 13,142 received the second dose.

Covid-19: What you need to know today (Hindustan Times: 20210419)

https://epaper.hindustantimes.com/Home/ArticleView

Delhi recorded 24,375 new cases of the coronavirus disease (Covid-19) on Saturday at a positivity rate of 24.56%. No Indian city has registered more; actually no city anywhere in the world has, at least to this columnist’s knowledge. Sure, Los Angeles saw 29,174 cases on December 26, in the worst phase of the US’s debilitating third wave of the viral pandemic, but that was because of Christmas (it recorded no cases on December 25). Delhi, some may argue, isn’t a city, but a city-state, and technically a Union Territory with a legislature. Still, it does have all characteristics of a large city — a predominantly urban population and 11 administrative districts that are tightly connected. It may be almost twice as large as New York, but it is marginally smaller than London. And right now, it is reeling under a fourth wave of Covid-19 — not just in terms of cases, but deaths too. On Saturday, it saw 167 deaths, the highest to date. Sunday’s numbers are not in when this column is being written.
How bad is the city-state’s fourth wave? According to Jamie Mullick, the keeper of HT’s Covid-19 dashboard (from back in the time when the numbers were not so easily available), Delhi’s fourth wave is actually as bad as the city’s previous three waves combined (in terms of peak case levels). The seven-day average of cases on Saturday was higher than the highest seven-day averages witnessed during the previous three peaks — taken together (see the tables accompanying this piece).

The numbers reflect that — in the seven days to Saturday, Delhi recorded 13.4% of the total (827,998) cases it has seen since the beginning of the pandemic.

The seven-day average of deaths presents a healthier (I know, unfortunate choice of words) picture. It was 104 on Saturday, still lower than the peak seven-day average seen during the last wave.

It makes little sense to dwell on what went wrong and how we got here. All the usual suspects — from complacence to apathy to misplaced priorities to a complete disregard for science and data — ave been at play. But how do we get out of here?

Hindustan Times (after the country’s first, bitter experience with a 68-day-long lockdown) has maintained that comprehensive lockdowns are avoidable except in two cases. One, the health infrastructure of a city or a region is under threat of being overwhelmed, or already is, and a further rise in cases would result in (I apologise for the choice of words in advance but this isn’t the time to sugar-coat things) people dying on the streets. Two, the city or region continues to see a huge increase in cases, with a high positivity level (a clear indicator that things could get worse). On Saturday, Delhi chief minister Arvind Kejriwal said at a press briefing that the city-state faces a shortage of oxygen, drugs, and ICU beds. Also on Saturday, Delhi’s positivity rate touched 24.56% (which means one in four tests turned up positive). The seven-day average of the positivity rate (on Saturday) was 16.5% and rising fast. Delhi clearly needs a short sharp lockdown, one that includes curbs on inter-state movement of people (not goods) without good reason, perhaps even on trains and flights.

It can be argued that there will be an economic cost to all this, just as the local government likely reasoned a few weeks ago — a time when it made sense to impose some not-so-drastic restrictions — that there would be an economic cost to these, but the alternative is unimaginable. Indeed, Delhi, and India’s management of the Covid-19 pandemic is a study in reactive management — we have always been a step behind the virus.

Delhi also needs to aggressively vaccinate people. A little over two million people have received one dose of a vaccine and around 440,000, both doses. That’s around 12% of the city-state’s population (more than many other cities and regions) that has some form of protection against severe infection and death (there’s enough research to show that even one dose substantially enhances this protection). The question I would be asking, if I were in either the state or union government is simply this: how soon can we double this number? Because 25% protected against severe illness and death definitely sounds better.
To bolster health system

To bolster health system, city pvt hospitals to add 2,100 Covid beds (Hindustan Times: 20210419)

https://epaper.hindustantimes.com/Home/ArticleView

The Delhi government on Sunday directed private hospitals and nursing homes that provide Covid patient care in the Capital to reserve at least 80% of their ward and ICU beds for Covid-19 patients. It also directed Delhi government-run Covid-19 hospitals to increase their bed capacities. The state government said the directives will increase the total Covid-19 ward beds by 3,875 and ICU beds by 1,126.

Delhi chief minister Arvind Kejriwal and deputy chief minister Manish Sisodia also inspected a few hospitals and Covid Care Centres where beds will be added in the coming days.

In the first order on Sunday, the Delhi government noted that all 115 private hospitals and nursing homes catering to Covid patients are running at full capacity. “It has been observed that occupancy of Covid ICU beds and Covid ward beds have almost reached 100% and 90% respectively in the 115 private hospitals providing Covid-19 related treatment. Therefore, to further augment the bed capacity for Covid-19 patients, all nursing homes and private hospitals providing Covid related tre

COVID-19 immunisation

**New Cases (The Asian Age: 20210419)**

Delhi sees biggest daily jump with 25,462 Covid-19 cases

AGE CORRESPONDENT
NEW DELHI, APRIL 18

Delhi on Sunday recorded the biggest jump in its daily Covid-19 tally with 25,462 fresh cases, while the positivity rate shot up to 25.74 per cent — meaning almost every third sample being tested in the city is turning out to be positive.

Delivering more bad news in an unprecedented public health crisis sweeping not just Delhi but the entire nation, Chief Minister Arvind Kejriwal said less than 100 ICU beds are available in hospitals in the capital.

Authorities reported 161 deaths due to the disease in the last 24 hours. A day ago, 24,739 Covid-19 cases and 167 deaths were reported in the city.

As the situation turned serious every passing hour, Kejriwal shot off letters to Prime Minister Narendra Modi and Union Commerce and Industries Minister Piyush Goyal urging them to ramp up bed capacity in central government-run hospitals and ensure “unnamed” supply of medical oxygen.

“With Covid situation has become very serious in Delhi. There is a huge shortage of beds and oxygen. I request that at least 2,600 out of 10,000 beds in central government hospitals be reserved for Covid patients and oxygen be immediately provided in Delhi,” he wrote in the letter to PM Modi.

Currently only 1,800 of 10,000 central government hospital beds are reserved for Covid-19 patients, he said.

Kejriwal cited that less than 100 ICU beds are available in Delhi now and said he spoke to Union Home Minister Amit Shah on Sunday morning and stressed on the need of beds for Covid patients.

During a press conference, he said the Delhi government in the next 2-3 days will come up with 6,000 beds with oxygen facility at Yamuna Sports Complex, Radha Soami Satsang Beas premises and schools. The Delhi government also directed all nursing homes and private hospitals providing Covid-19-related treatment to reserve at least 50 per cent of their ICU and ward bed capacity for coronavirus patients.

According to the order, the occupancy of ICU beds and ward beds for coronavirus patients in 115 private hospitals has reached “almost 100 per cent and 90 per cent” respectively.

Kejriwal said Delhi is facing “acute shortage” of oxygen for Covid-19 patients and alleged the govt of the city has been “diverted” to other states.

In his letter to Goswami, the Delhi CM urged him to ensure “uninterrupted” supply of 700 MT of oxygen on daily basis and restore supply of 160 MT of oxygen by a supplier INOX.

A private hospital in the city closely missed a tragedy in the city Saturday night due to shortage of oxygen, he said in an online briefing earlier on Sunday.

Kejriwal on Sunday visited Yamuna Sports Complex and Commonwealth Games Village where additional beds are being arranged for patients.

Deputy Chief Minister Manish Sisodia, along with Health Minister Satyendra Jain, paid surprise visits to Satyawadi Raja Harish Chandra Hospital, Bawana Hospital, Radha Soami Satsang Beas and a DRDO-run facility to take stock of medical infrastructure.

Sisodia said that 6,000 oxygen-supported beds are being readied at Radha Soami Satsang Beas. Of these, 2,000 oxygen beds will become available on Tuesday.

On the second day of the weekend curfew, most of the shops in the city, barring those selling essential items such as groceries, vegetables and fruits, remained closed while roads were a deserted look.
Govt guidelines advises to set up Covid facilities in gated residential complexes

AGE CORRESPONDENT
NEW DELHI, APRIL 18

The Delhi government issued guidelines on Sunday for gated residential complexes to set up Covid facilities amid alarming surge in coronavirus cases.

The Directorate General of Health Services also issued guidelines for the resident welfare associations (RWAs), residential societies and non-governmental organisations (NGOs) in prevention and control of Covid-19 transmission in gated residential complexes.

It said the Covid care facility would be set up using the resources of the RWAs/residential societies/NGOs and would be a dedicated health facility for management of suspected, asymptomatic and pre-symptomatic or very mild cases residing in that particular residential facility.

“No intermixing of suspect and confirmed cases

A DOCTOR residing within the gated complex or that provided by the NGO will facilitate daily medical examination of the admitted patients. Also, a caregiver designated by the RWA or the NGO shall be identified to provide care to the patients.

A doctor residing within the gated complex or that provided by the NGO will facilitate daily medical examination of the admitted patients. Also, a caregiver designated by the RWA or the NGO shall be identified to provide care to the patients.

The guidelines said the Covid care facility would be a makeshift one and it may be set up in a community hall, centre, common utility area within the premises of residential complexes or empty flats that are isolated location-wise from the rest of the occupied dwelling.

The guidelines said the Covid care facility should have a separate entry/exit and a separate toilet for suspected and confirmed cases with proper cleaning and supplies. Entrance to have mandatory hand hygiene (sanitiser dispenser) and thermal screening provisions for caregivers, it said, adding that the beds shall be placed with spatial separation of at least 1 metre from one another.

Adequate natural room ventilation shall be ensured. Putting up exhaust fans to vent out air from the facility (to open area) is desirable. For air-conditioning/ventilation, the guidelines of CPWD shall be followed which intervalises emphasises that the temperature setting of all air-conditioning devices should be in the range of 24-30 degrees Celsius, relative humidity should be in the range of 40-70%, intake of fresh air should be as much as possible and cross ventilation should be adequate, it added.

For cleaning and disinfection, the guidelines said that used linen, pillow covers, towels could be kept in disposable bags for 72 hours and then washed at the patient’s home using commonly used detergents.
Covid-2\textsuperscript{nd} wave (The Asian Age: 20210419)

Vital shortages hit India amid Covid's 2nd wave

Prime Minister Narendra Modi's call to the people concerned to use the entire national capacity in the production of vaccines against Covid-19 comes at a time when poor anticipation and planning coupled with a lack-advisal approach of the government he heads have started having a telling impact on the pandemic situation in the country. For more than a year, the world has been under the grip of the fear the micro-organism has unleashed, but the nation which the government and the Prime Minister have been tom-tomming as the pharmaceutical hub of the world is now facing a shortage of everything that the healthcare workers need to fight the virus and save lives — hospital beds, antiviral life-saving drugs, vaccine, oxygen, intensive care units and ventilators. This, despite the fact that the government has set up a dedicated fund — PM-Cares — to promote initiatives to fight the virus.

The nation has no idea whether the government was, like most people in India, thinking if the pandemic had vanished, given the very little effort it was seen to be taking to face an exigency like the one we are facing now. There was little or no extra investment made to augment healthcare infrastructure in the country in the interregnum or to step up production capacities of the same materials, which we now face a shortage of. That the government has learnt little from the past is reflected from the fact that even the Bharatiya Mazdoor Sangh, the national trade union belonging to the Sangh Parivar to which Mr Modi's BJP belongs, has cautioned about the reverse migration of guest workers from the towns and cities to the villages, in anticipation of another nationwide lockdown. It is stating the obvious that the government did not show as much alacrity as the guest workers did about planning for the future in the face of a pandemic attack.

It must not also go unsaid that the government had been busy plucking the low hanging fruits from the beginning of the corona fight. It started with the premature show of gratitude to the healthcare fraternity even before they started the real fight. Even the Indian Air force was dragged into the farce of showering flower petals on them from the skies when, on earth, they were fighting the virus with their back to the wall, with little availability of infrastructure and consumables. The government missed no chance to advertise the world’s largest vaccination programme with little idea about the number of people it will have to vaccinate or the quantity of vaccine it would require or how to produce and distribute the same. Today, the vaccine manufacturers are running pillar to post seeking financial help to augment production capacity but the government does not seem to understand it at all; we heard no firm and immediate commitment from the government till now.

But it’s not all lost as yet — the government must launch massive investment programmes in healthcare infrastructure, put its foot down firmly and ban all social, religious and political gatherings that can turn superspreaders, and work with every institution, state or otherwise, to enforce Covid-appropriate behaviour. Every rupee, every action and every moment count now.
